

## BOARD OF DIRECTORS APPLICATION

### Contact Information:

Eric Hopf  
Director of Project Management, Photon Brothers  
9869 E Easter Ave, Centennial, CO 80112  
Eric@PhotonBrothers.com  
720.627.7272

### Biography:

I'm a driven professional with a master's degree in both Sustainable Business Administration and Environmental Science & Policy. A collaborative communicator, I have a proven record of business data analysis and implementing effective process improvements. Originally from Connecticut, I made my way to Denver post-graduate school and fell in love with the state's outdoor activities, passion for renewable energy and making an impact through solar.

### Solar or Storage Experience:

I am currently the Director of Project Management at Photon Brothers which has four office locations throughout Colorado. In my two years with Photon Brothers, I have been promoted twice and now oversee a team of Project Managers where I established best practices and standardized procedures amongst all markets to promote continuity, while responsible for 1,000+ concurrently active projects and their customer experience. Additionally, I work cross-functionally with other departments to assist in resolving roadblocks and being a resource for my team and their success by providing the tools they need to succeed. I work closely with the co-founders to ensure Photon Brothers meets its monthly, quarterly and yearly revenue goals.

Prior to Photon Brothers, I was a Commercial & Residential Project Manager at Solar Power Pros where I worked alongside stakeholders, engineering firms and subcontractors to ensure all projects were completed on time and on budget. Before that, I was both a Project Manager and Energy Consultant for Auric Energy where I generated leads and was the top sales rep in my market and also excelled at the project management workflow, understanding permitting, utilities and interconnection.

## My Priorities:

1. Work with the utilities and building departments to make the process easier for homeowners to get solar and storage by cutting down on review and approval time
2. Work to establish more Co-Op programs and initiatives to make going solar more fiscally available to homeowners who are either not in a financial position or don't qualify for solar due to the quality of their roof
3. Strengthen the relationship between customers and their installers by providing a higher-quality customer service experience both during and the years after solar installation

## My Strengths:

1. Energy Policy
2. Leadership
3. Project Management & Customer Success
4. Business Development
